INTRODUCTION

Fresh Computer Engineering graduate seeking a Software Engineering opportunity to apply and further develop technical skills. Experienced with **Python, C++, and Rust** through academic projects, with current focus on **full-stack development using HTML, JavaScript, and Java**. Participated in an **AI/ML Bootcamp** covering Agentic AI, LLMs, RAG, and Computer Vision. Adaptable and committed to learning new technologies and contributing to meaningful software projects.

WORK EXPERIENCE

- Stratpoint AI/ML Bootcamp** – AI Labs Intern (Aug-Sep 2026)
- Participated in lectures and training in Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and Computer Vision.
 - Developed AI/ML capstone prototypes/POCs applying LLMs, RAG, and computer vision to practical use cases.
 - Built AI-powered prototypes using Python, Streamlit/Gradio, and pre-trained AI models.

EDUCATION

- 2021-2026** **University of the Philippines-Diliman, Electrical and Electronics Engineering Institute, Quezon City**
Bachelor of Science in Computer Engineering
Graduated as Magna Cum Laude
GWA: 1.4375
- 2015–2021** **Philippine Science High School – Eastern Visayas Campus, Leyte**
Graduated with High Honors

TECHNICAL SKILLS

Programming Languages: JavaScript, Java, Python, C, C++, Rust
Web Development: HTML, CSS, JavaScript, RESTful APIs, JSON
Databases: SQL, NoSQL
Software Development: Object-Oriented Programming (OOP), Data Structures and Algorithms, Software Debugging, API Integration
Developer Tools: Git, GitHub, Docker, Visual Studio Code, Postman
AI & Emerging Technologies: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Computer Vision, ChatGPT, Claude

RELATED PROJECTS AND OUTPUTS

- Pokemon Web Application (React, Node.js, MongoDB, API, HTML/CSS)**
- Developed a full-stack web application with secure user authentication and session management.
 - Implemented protected API routes, password hashing, and user-specific data storage using MongoDB.
 - Developed dynamic frontend interfaces and backend REST APIs following client-server architecture principles.
- AI/ML Bootcamp: Solar Forecaster (Python, LLM, AI)**
- Developed an AI-powered Solar Output Prediction web application using Streamlit and Python, leveraging a pretrained machine learning model to predict solar energy output based on weather conditions.
 - Integrated the pretrained model with a Groq-powered LLM agent to support natural-language queries and automated tool calling.
- Audio Codec: WAV to FLAC converter (Rust, DSA)**
- Contributed on a partial Audio Codec project that converts a wav audio file to flac format.
 - Implemented algorithms on linear predictive coding to predict samples of an audio signal using Rust.
 - Implemented several encoders (Zigzag, CRC8, CRC16, UTF8, Rice) for the flac writer using Rust.
- LoRa Mesh Sensor Network for Air Quality and Exposure Data in Jeepneys (C++, microcontroller)**
- Designed and deployed a LoRa-based mesh sensor network with four Arduino-based sensor nodes and a gateway for real-time air quality monitoring in jeepneys.

ACTIVITIES AND AWARDS

- University Scholar in UP-Diliman (AY 2021-2022, AY 2022-2023, AY 2023-2024, AY 2024-2025)
